**INTENDED NATIONALLY
DETERMINED CONTRIBUTION**

2020-2030

Partnership for Market Readiness
May 2015

MEXICO'S INDC

- Submitted on March 27th to the UNFCCC -first developing country-.
- Includes mitigation of GHG and Black Carbon and adaptation actions for 2020 - 2030
- Commitment with a **Conditional** and **unconditional** component, strictly aligned to the objectives and priorities established in the **General Climate Change Law [2012]**
- Economy-wide, Business As Usual scenario, based on an updated inventory for 2013 with a bottom-up approach

Greenhouse Gases MITIGATION GOAL

-22%

-36%

-51%

-70%

CONDITIONAL

With a WGP 900 for BC, unconditional mitigation increases to 25% and conditional to 40%

This INDC implies that MEXICO will reach a net emissions peak starting in 2026. Emissions intensity per unit of GDP will reduce by around 40%

In order to achieve rapid and cost efficient mitigation robust global market based mechanisms are essential.
Achieving our conditional goal will require functional bilateral, regional and international market mechanisms.

ADAPTATION commitment with these priorities

- to increase resilient capacity of communities
- to increment in the resilience of strategic infrastructure and of the ecosystems that host national biodiversity [ecosystem-based adaptation]

For the first time Mexico translates previous aspirational commitments (GCCL) into mandatory goals

CHALLENGES

- To detail the actions that support our INDC [sectoral approach, cost analysis, etc.]
- To develop the MRV framework
- To strengthen policies and measures that support economy-wide actions
 - Carbon tax
 - Phase-out subsidies
 - Carbon pricing
- To define finance, technology transfer and capacity building support measures
