

## KNOWLEDGE PRODUCTS

The PMR generates and disseminates knowledge products focused on carbon pricing and facilitates knowledge sharing through technical workshops, meetings, training sessions, public events, webinars, and e-learning platforms.

## PROMOTING INNOVATION

### Selected Highlights

**CHILE:** Financed by the PMR, the Mitigation Plan for the Energy Sector in Chile sets out recommended measures and actions to take in the energy sector to achieve the Energy Policy 2050's and the NDC's mitigation targets, and steps needed to implement them. This constitutes a first big step towards meeting Chile's long-term commitments under its Energy Policy 2050, and sets a precedent for other countries in the region to help achieve their NDC targets in the energy sector.

**CHINA:** PMR funding has been instrumental in supporting the design and implementation of key building blocks for China's national ETS, with a particular focus on the electricity sector and state-owned enterprises. China soft launched its national ETS in January 2018.

**SOUTH AFRICA:** The PMR is supporting South Africa to design and implement its carbon tax, which is scheduled to start in 2019. It is also supporting the development of a crediting program that would allow companies to offset some of their emissions under the carbon tax.

**KAZAKHSTAN:** PMR funding has been instrumental in helping Kazakhstan address key challenges facing its national ETS. Kazakhstan relaunched its ETS, which was on hold for two years, in January 2018. In addition, the Ministry of Energy has launched an online platform for monitoring, reporting, and verifying emission sources and GHGs.

## CONTRIBUTING PARTICIPANTS

## KNOWLEDGE EXCHANGES

To support the design and implementation of innovative instruments to strengthen GHG mitigation, the PMR provides a platform for countries to share their experiences in building institutional and technical capacity.

# SUPPORTING CARBON PRICING POLICY AND ACTION

In the PMR, countries have a trusted partner to understand, test, and develop carbon pricing instruments to help achieve their climate change mitigation objectives.

We are at the forefront of facilitating the design and development of carbon pricing instruments in over 20 countries.

### Quick Facts

### Recent Milestones

# OUR PROGRAMS

## 1. COUNTRY PROGRAMS

The centerpiece of each implementing country participant's program is the Market Readiness Proposal, or MRP, which serves as a road map for planning, designing, and piloting a carbon pricing instrument. So far, 16 countries have finalized their proposals. The focus of each country's MRP is summarized in the map on the right – for more details download annual report from our website.

## 2. TECHNICAL WORK PROGRAM

The Technical Work Program complements participants' readiness activities by providing support on those elements that are common across countries. Its objectives are to facilitate experience and knowledge sharing; develop practical guidance on common issues; identify good practice and common standards; and help build necessary capacity.

The program supports the design and implementation of carbon pricing systems and their related building blocks and supporting services, such as registries, stakeholder engagement, and emissions measurement and reporting. This support is provided through a range of activities:

## 3. POLICY ANALYSIS WORK PROGRAM

The Policy Analysis Work Program provides timely, customized, analytical support along the Paris Agreement milestones and throughout the NDC implementation cycle. It helps countries refine the analytical underpinnings of their NDC target-setting and implementation plans by:

- Building technical capacity
- Developing and sharing analytical approaches and tools
- Supporting the modeling and analysis of policy instruments
- Analyzing options for integrating carbon pricing with existing sectoral and national policies.

The program fosters knowledge exchange and discussions on NDC emissions scenarios and carbon pricing modeling.

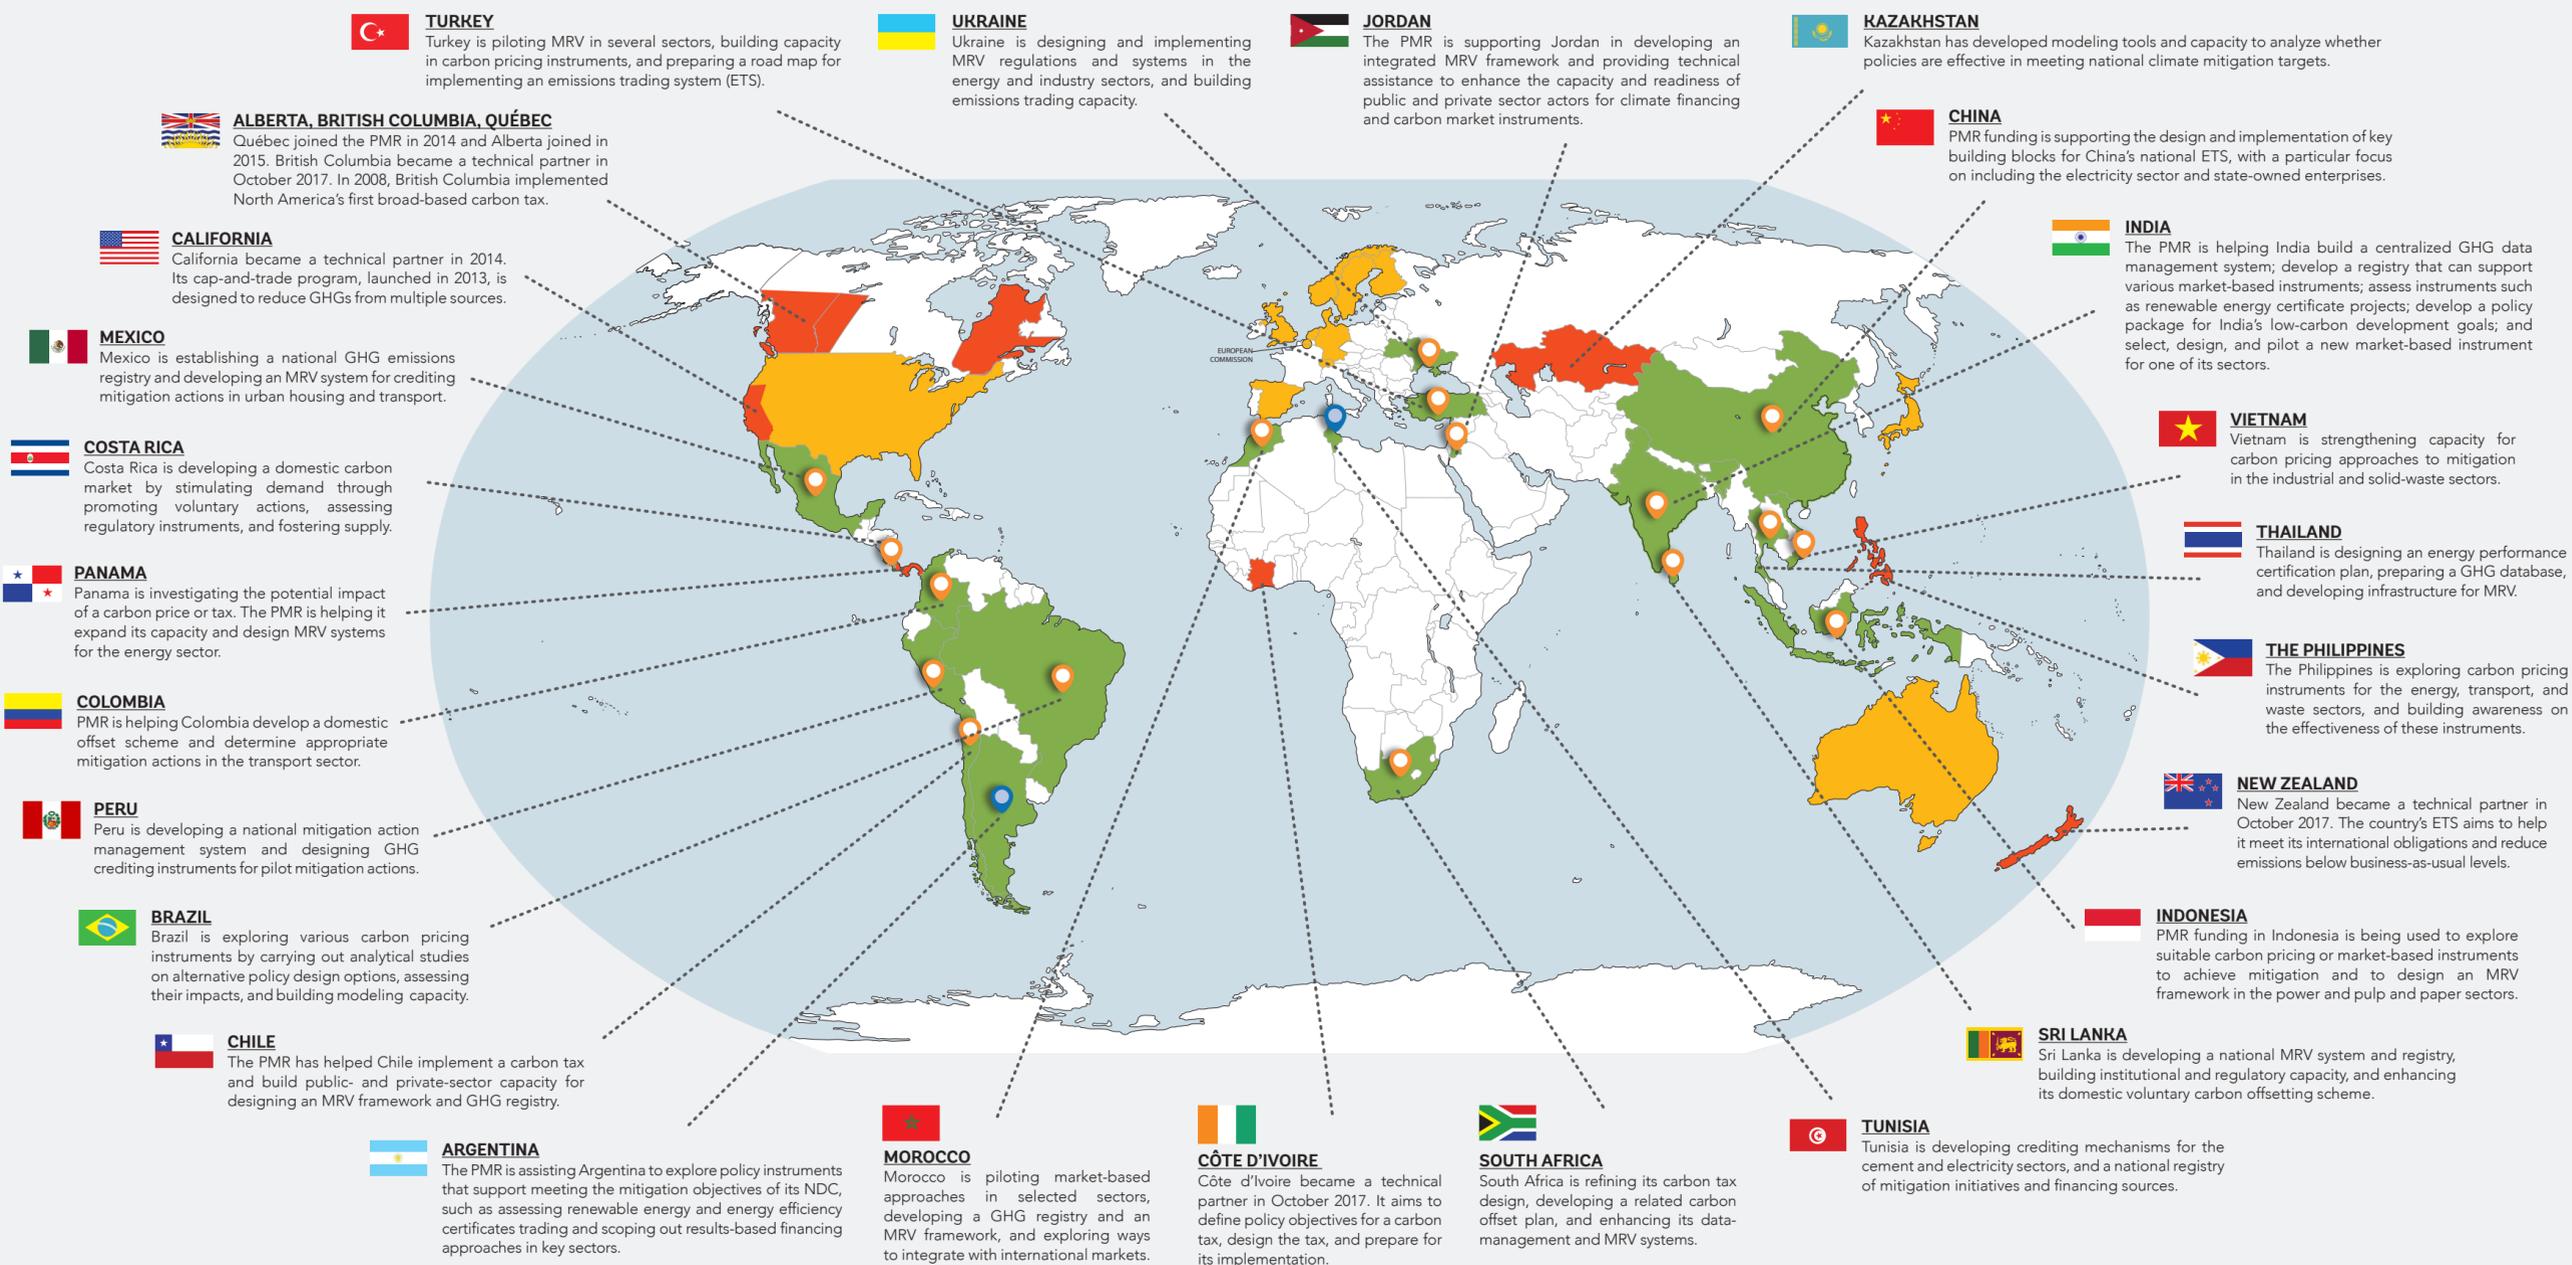

## PMR'S STRUCTURE, PROCESS, AND PROGRESS

The PMR consists of contributing participants, who provide financial support to the PMR Trust Fund and share their carbon pricing experience, and implementing country participants, who receive funding and technical support. Together, they make up the partnership assembly – the PMR's decision-making body.

Technical partners represent countries or sub-national jurisdictions that are at an advanced stage of

carbon mitigation policy development. While they do not participate in decision-making, they gather data and provide valuable lessons that contribute to the PMR's knowledge exchange.

The map shows the different categories of participants and the stage in the process reached by each implementing country participant. The focus of each country's MRP is also summarized here.

The map was produced by the Map Design Unit of the World Bank Group. The boundaries, colors, denominations, and any other information shown on the map do not imply, on the part of the World Bank Group, any judgment on the legal status of any territory, or any endorsement or acceptance of such boundaries.
